Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that the Examiner misses the mark because the the claimed invention is drawn to a method of increasing performance gain during treatment of a cognitive deficit. Applicant do not claim the phosphodiesterease inhibitor compounds themselves. Applicant also do not claim the general treatment of stroke patients via cognitive training. Christensen simply does not teach the treatment of a cognitive disorder by inhibiting phosphodiesterease 4 in order to enhance CREB pathway.

This is not persuasive because Christensen clearly discloses the claimed phosphodiesterase inhibitor while the Merck Manual discloses cognitive training, both references for the purpose of treating stroke victims. Applicant is reminded that a performance gain of a cognitive task in a stroke patient is an inherent property when the same compound is administered to the same patient at the same dose. Therefore, the "long lasting" and "enhancement of CREB pathway function" limitations are met because they are inherent properties. Moreover, the Examiner interprets performance gain of a cognitive task as covering a wide range of impairments, which include aphasia (language/speech disturbance) and apraxia (impaired ability to carry out motor activities), as disclosed in Applicant's own disclosure. Essentially, the scope of the instant claims covers administration of the phosphodiesterase inhibitors at any time to the patient. Therefore, Applicant's assertion that Christensen is simply teaching the administration of rolipram during the acute phase of the stroke to reduce TNF still meets the limitations of the instant claims as it relates to the Merck Manual reference.

Applicant also argues that an inherency argument is not appropriate in an obviousness rejection. It is submitted that Applicant's own disclosure cannot be an appropriate source of information. In short, the cited prior art references do not provide a teaching of a beneficial link between the inhibition of phosphodiestereases and cognitive training.

This is not persuasive because Applicant still does not understand that the inherency argument was not used to support the motivation in the obviousness rejection. Applicant's disclosure was merely used to show that the term "performance gain of a cognitive task" can be interpreted to cover a wide range of impairments, which overlap with the teachings of the prior art. Nonetheless, Applicant is invited to show factual data that performance gain would not result in the method taught by the cited prior art references.
